

BRR THOA Vendor List for Heat cable and Gutter Repair

When obtaining bids from Vendors to install heat cable, below are some items to inquire about:

- Heat Cable:
 - Ensure you are purchasing commercial grade heat cable. Due to our winters, commercial grade has a longer life expectancy. Self-regulating heat cable should be GFEP trip load.
- Voltage 220-240v vs 110v:
 - 220/240V requires change of circuit breaker. This uses less power than 110v
 - Requires a licensed electrician to install 220/240 circuit breaker (if you want 220/240v, ensure this is included in your bid)
 - Self-regulating heat cable should have GFEP trip load circuit breaker installed
- Cable fasteners to shingles:
 - Shingles and roof cannot be compromised by drilling/nailing anything through shingles or roof
- Moisture and temperature sensors:
 - These can be very helpful and also save on energy because the sensor will manage the power when the moisture and/or temperatures are at a certain level.
- Warranty of cable/fasteners and labor:
 - Understand the warranty timeframe for both the cable and the installation
 - Ten + years is recommended
- Gutter and spouts:
 - Heat cable should run the entire length of the gutters
 - Ensure heat cable runs down the entire spout and extend at least 2-3" onto the ground.

Below are a few comments for each vendor and a table has been included so you can add your own notes

Wasatch Heat Cable **801-866-1110** www.wasatchheatcable.com

- Installs self-regulating tape with 220 or 240 V and offers sensors (moisture/temp)
- Patented fasteners which won't damage the shingles/roof
- If installed in the spring or summer then 10 ft installed; mention Black Rock Ridge and receive \$2 off a foot.
- Will also inspect pre-existing heat tape free of charge
- Warranty: 10 years

Build Pro - Gary

309- 648- 8665

- Offers self- regulating tape with 240 V
- \$ 11 per foot
- Gutters at \$ 9 per foot and puts the contacts every 18 inches compared to the 24 inches other gutter companies do
- General contractor

GTC Electric - Gregory

435-731-0727 www.gtcelectric.com

- Electrical
- Heat Tape

Ace Gutters

801-676-1048 www.acegutterinc.com

- Wasatch Heat Cable uses this company for gutter installation and major repairs
- Minimum charge is \$250; ranges between \$5 and \$7 per foot depending on install requirements

Use the following table to log your own information when obtaining bids, etc. from Vendors.

Vendor Name	Type of Heat Cable (commercial, etc.)	Voltage	Type of Cable Fasteners	Offers Sensor/price	Type of Warranty	Gutters/Spouts (is it included in bid?)
Wasatch Heat Cable 801-866-1110						
Build Pro Gary 309- 648- 8665						
GTC Electric Gregory 435-731-0727						
Ace Gutters (no heat cable) 801-676-1048
